SUMMARY

Computer Engineering graduate (University of Mumbai, 2026) looking for a fresher or junior role as a Java Developer or Software Developer. Built and deployed backend projects using Java, Spring Boot, Spring Security, JPA/Hibernate and SQL databases. Still learning, mostly by building real projects, reading documentation and debugging my own code.

TECHNICAL SKILLS

Languages: Java (OOP, Collections, Exception Handling), SQL, JavaScript (basic), TypeScript (basic)
Backend: Spring Boot, Spring Security, Spring Data JPA / Hibernate, REST APIs, JWT Authentication, Maven
Databases: MySQL, PostgreSQL, MongoDB (basic)
Frontend (basic): HTML, CSS, Thymeleaf, React, Next.js
Tools: Git, GitHub, Docker (basic), VS Code, GitHub Copilot, Claude Code
Currently learning: Testing in Spring Boot, Docker, and system design basics

PROJECTS

SupportDesk – Customer Support Ticketing System

Live Demo | Source Code

Problem: Small support teams track customer issues over email, so tickets get lost and two agents can end up editing the same ticket.

How I solved it:

- Built a public portal where customers raise and track tickets without making an account, and a shared agent queue that updates live using Server-Sent Events.
- Added login and role-based access for agents and admins with Spring Security, and email updates through Gmail SMTP when a ticket is created or resolved.
- Used optimistic locking (JPA `@Version`) so that if two agents save the same ticket, the second save is rejected instead of overwriting the first.
- Moved the database from SQLite to MySQL after requests started timing out when several users wrote at the same time.

Tech stack: Java 21, Spring Boot 3, Spring Security, JPA/Hibernate, MySQL, Thymeleaf, Cloudinary, Docker

NutriScan – Food Label Scanner

Live Demo | Source Code

Problem: Nutrition labels on packaged food are hard to understand quickly, especially for people with allergies or diet preferences.

How I solved it:

- Built a Spring Boot REST API that reads a product's barcode and explains its sugar, salt, fat and additives in simple words. It also shows allergy and diet warnings and whether the product is veg or non-veg.
- Looked products up in the PostgreSQL database first and fell back to the Open Food Facts API for products not saved yet.
- Added user accounts with JWT authentication, and suggestions for better-rated alternatives.
- Started as a college team project and later rebuilt with Spring Boot and Next.js.

Tech stack: Java 21, Spring Boot, PostgreSQL, JWT, Docker, Next.js, TypeScript

EDUCATION

B.Tech in Computer Engineering — 2021 – 2026
University of Mumbai — CGPA: 7.12 / 10

Higher Secondary Certificate (HSC), Maharashtra State Board — 86.83% | 2021
Secondary School Certificate (SSC), Maharashtra State Board — 74.60% | 2019

CERTIFICATIONS

- Java, Python, C, PHP & MySQL – Spoken Tutorial, IIT Bombay
- Programming and Data Structures Test – AICTE PARAKH
- Python Essentials 2 – Cisco Networking Academy
- Full Stack, Cloud Computing, Tableau & Virtualization – Infosys
